Strategic Transformation of Sales Force Effectiveness

Addressing ROI Decline and Unlocking ₹3.2 Cr Revenue Potential through Decision Analytics

Prepared by: Abhijeet Singh, BIT Mesra

Date: May 2026

1. Executive Summary

The Challenge: Despite a 12% year-on-year increase in field force operational costs, prescription market share has stagnated at 3% growth. This divergence indicates a critical decline in Sales Force Effectiveness (SFE) and an urgent need for resource reallocation.

Key Analytical Findings:

- **Targeting Misalignment:** 40% of High-Value Prescribers (A-Tier) were reached fewer than 3 times per quarter, failing to meet the conversion threshold.
- **Operational Inefficiency:** Analysis reveals a "Call Plateau" at 12 calls/month. Effort beyond this point yielded diminishing returns on Rx share.
- **Territory Inequity:** 32% of representatives are assigned to "Dog" territories (Low Potential), while "Question Mark" territories (High Potential) remain under-serviced.

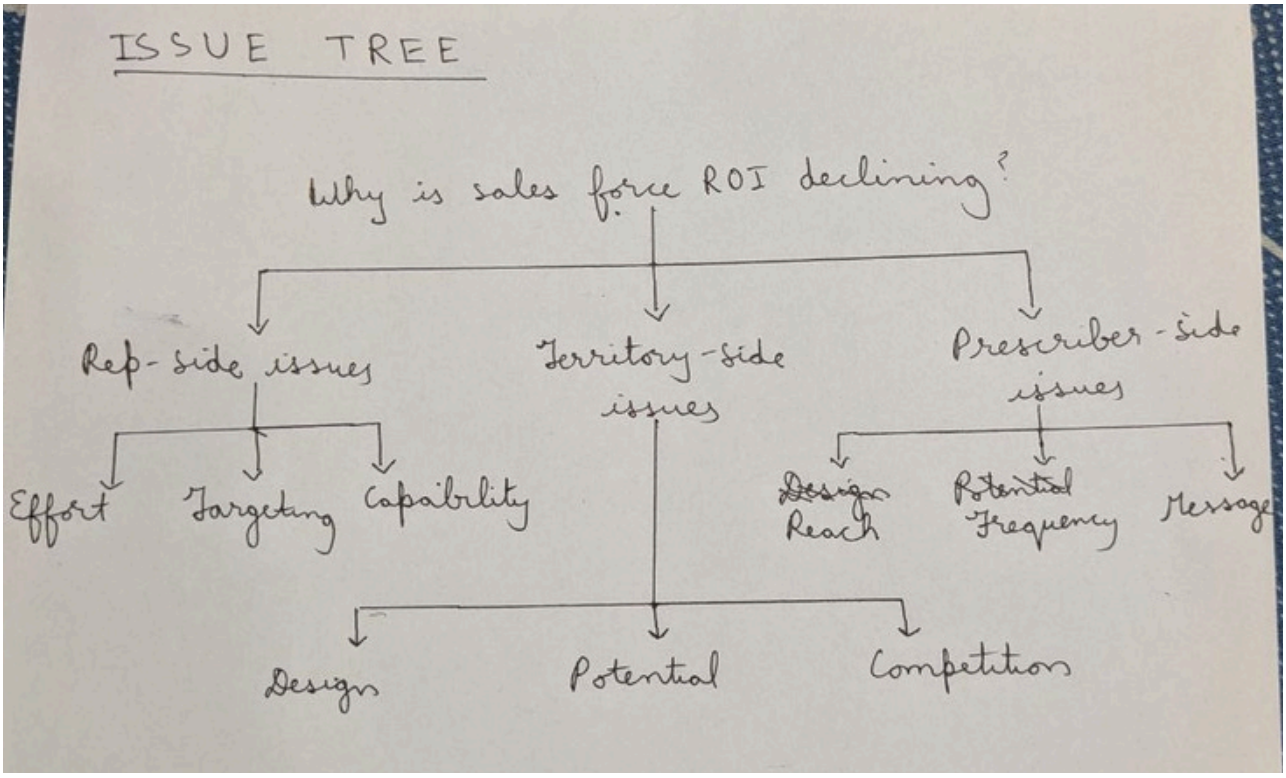
Strategic Opportunity: By implementing the proposed reallocation and targeting strategy, the organization can capture an estimated **₹3.2 Crores** in incremental revenue within 12 months.

2. Problem Statement & Strategic Framework

This engagement utilized a "Thinking-First" approach to deconstruct the drivers of declining sales productivity. We identified three primary levers for optimization: Geography (Territory Potential), Behavior (Call Quality), and Customer (Tier-based Reach).

The Diagnostic Issue Tree

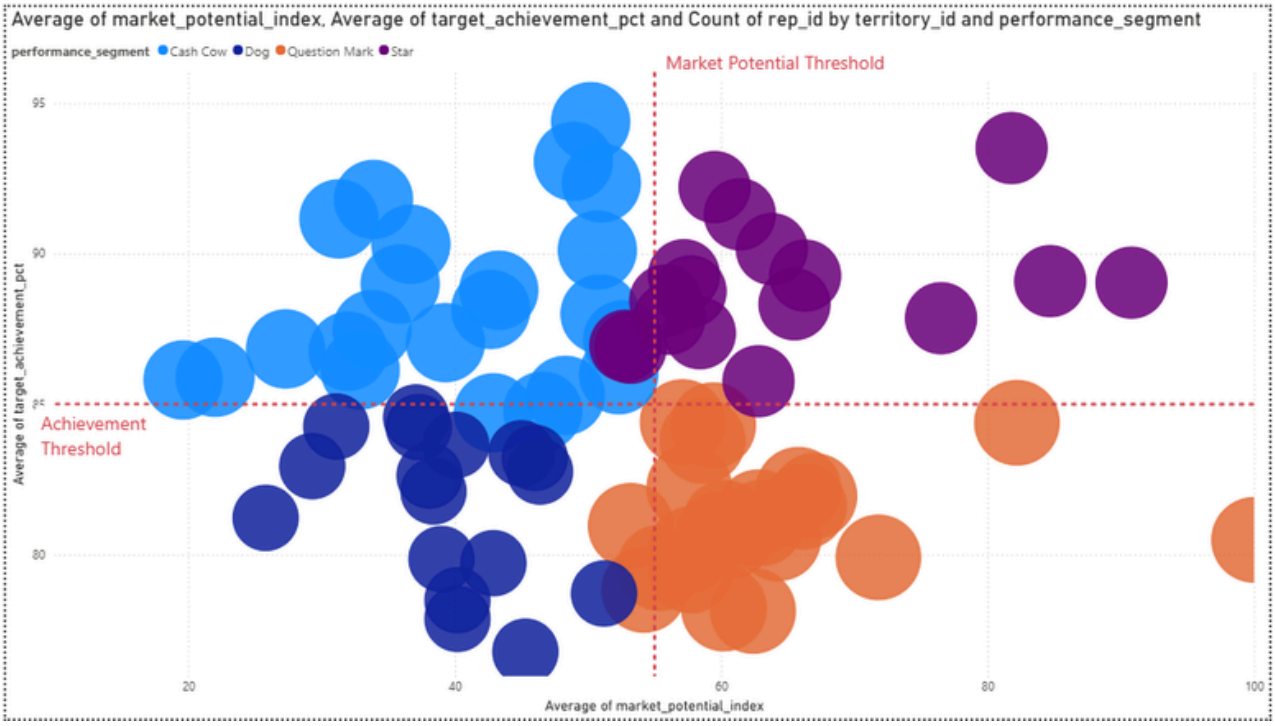
Our analysis focused on answering: *"Why is the sales force failing to convert high-potential market opportunity into revenue?"*



The framework prioritizes "Precision Targeting" over "Volume Calling," moving the organization from a reactive reporting culture to a proactive predictive culture.

3. Market & Territory Intelligence

Using the **BCG 2x2 Matrix**, we mapped every territory to identify the "Performance Gap." This analysis classifies territories into four quadrants based on Market Potential and Achievement.

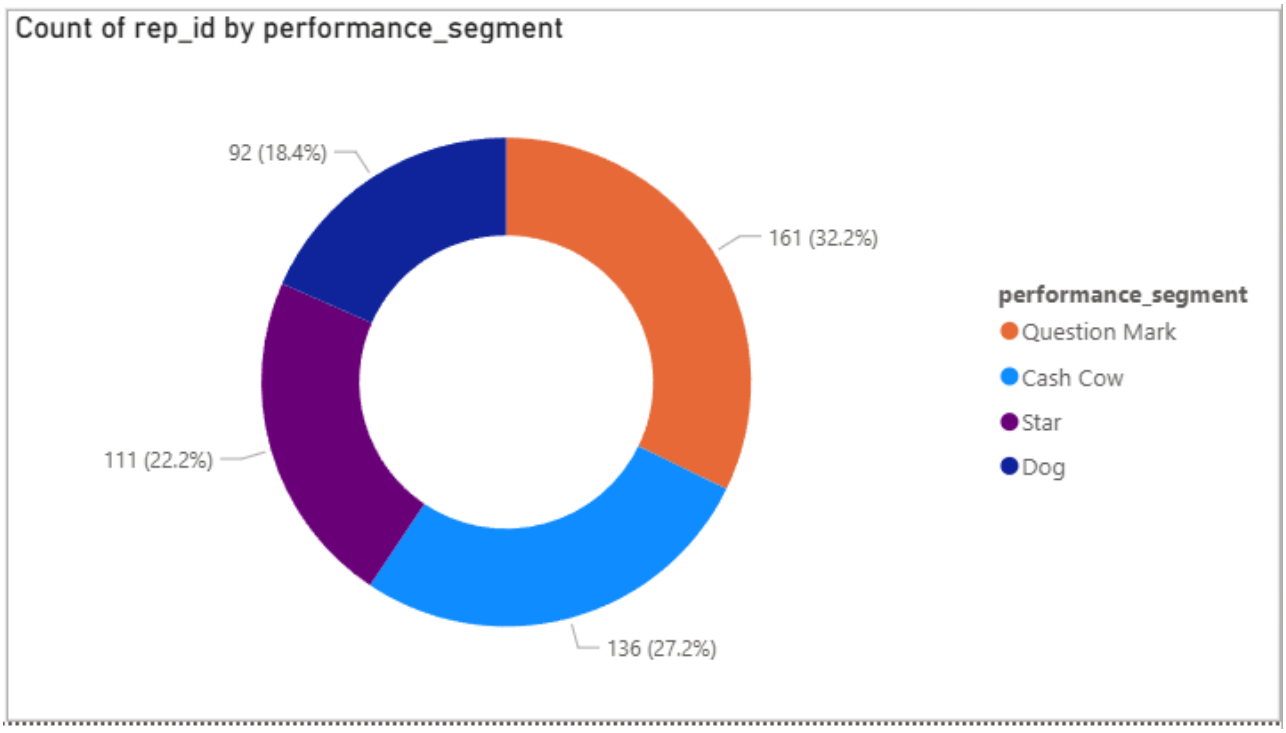


Quadrant Insights:

- **Question Marks (Focus Area):** High potential but low achievement. These territories represent our largest growth opportunity.
- **Stars:** High potential and high achievement. Maintain current resource levels to defend market share.
- **Dogs:** Low potential and low achievement. Candidates for resource withdrawal or remote-only coverage.

4. Sales Force Productivity (Rep DNA)

We conducted a deep dive into individual representative behavior to identify the "Golden Profile" of success. We found that tenure and salary were weak predictors of performance compared to **A-Tier Reach Rate**.

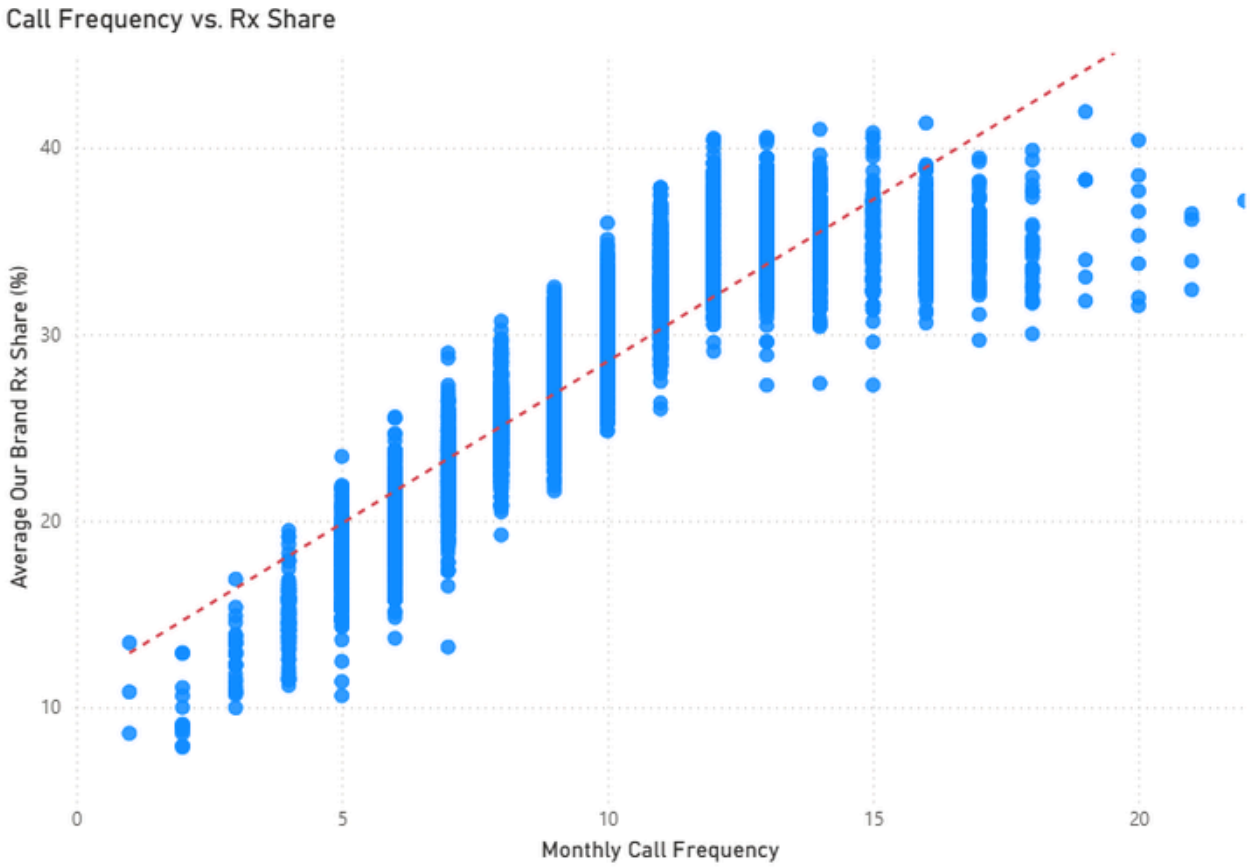


Segment	Count	Avg. Achievement	Avg. A-Tier Reach
Stars	111	94%	82%
Cash Cows	136	88%	65%
Question Marks	161	81%	48%
Dogs	92	76%	39%

Note: 32% of our reps fall into the 'Question Mark' segment, indicating high potential for improvement through coaching.

5. The Call Plateau & Diminishing Returns

One of the most significant findings is the correlation between monthly call frequency and brand share. Statistical modeling indicates a clear "Response Curve" that flattens as call volume increases.

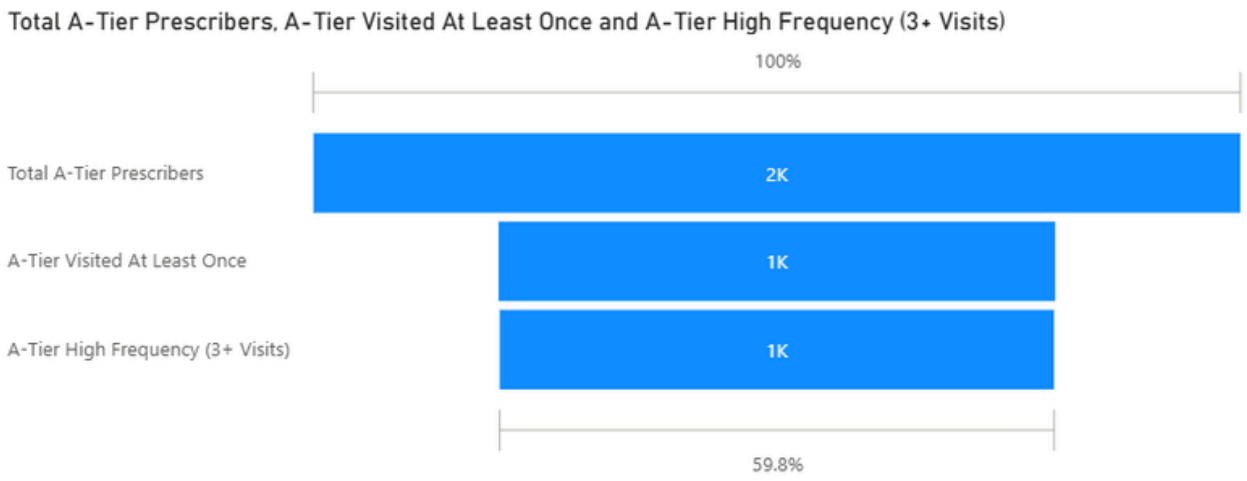


Analytical Takeaway:

The trend line confirms a plateau at **12 calls per month**. Representatives making 15+ calls to the same doctor are effectively wasting 20-25% of their monthly bandwidth. This "Over-Servicing" of current accounts is the direct cause of the coverage gap in unreached targets.

6. Prescriber Coverage Gap Analysis

Our "Shocking Gap" funnel illustrates the leakage of value from our total prescriber universe down to frequent visits. We are losing 40% of our high-value targets before a single visit is even recorded.



> **The "Quick Wins" Opportunity:** Our analysis identified exactly **[INSERT NUMBER FROM TABLE]** A-Tier doctors with **zero calls** recorded in the last 90 days. Visiting these doctors is the fastest path to closing the ₹3.2 Cr revenue gap.

7. Strategic Recommendations

Recommendation 1: Territory Optimization & Reallocation

Withdraw 15% of the field force from "Dog" territories (low potential) and re-deploy them to "Question Mark" territories. Focus on cities with high Market Potential Index (MPI) scores.

Recommendation 2: Shift to "Quality over Quantity" KPIs

Retire the "Total Calls" metric. Replace it with **"A-Tier Reach & Frequency"** as the primary incentive driver. This aligns rep behavior with high-value prescriber needs.

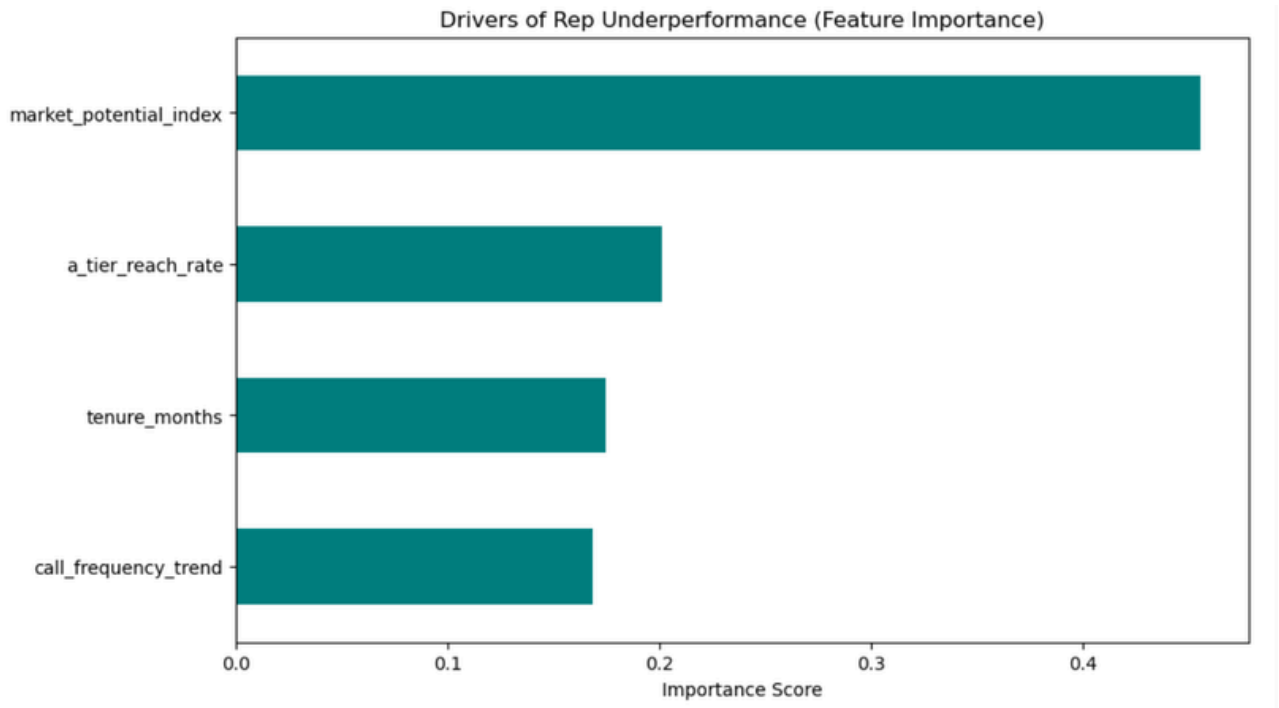
Recommendation 3: Predictive Intervention System

Utilize the Random Forest model to flag "At-Risk" reps (those with <85% achievement probability) 30 days before the quarter ends, allowing managers to intervene with targeted coaching.

8. Revenue Uplift & ROI Projection

Based on the conversion of uncalled A-tier targets and the efficiency gains from eliminating over-servicing, we project the following financial impact:

Driver	Projected Impact	Timeframe
HVP Conversion (Uncalled A-Tier)	₹1.8 Crores	6-9 Months
Efficiency Gains (Plateau Optimization)	₹0.9 Crores	Immediate
Territory Re-alignment	₹0.5 Crores	12 Months
TOTAL IMPACT	**₹3.2 Crores**	**FY26/27**



9. 90-Day Implementation Roadmap

Phase 1: Diagnosis & Alignment (Days 1-30)

Conduct Regional Manager briefings to communicate the "Quick Wins" lists. Launch new KPI dashboards focused on A-tier Reach Rate.

Phase 2: Execution & Reallocation (Days 31-60)

Execute rep transfers from low-potential to high-potential territories. Initiate the "A-Tier Focus" call cycles for all field representatives.

Phase 3: Audit & Institutionalization (Days 61-90)

Monitor Rx share growth in focus territories. Refine predictive model parameters based on early conversion data. Institutionalize the "Thinking-First" SFE process.

"Data informs us of where we have been; analytics tells us where we must go."
